

Idira Identity Security Blueprint

Idira™ Identity Security Blueprint, by Palo Alto Networks, helps organizations establish and evolve an effective identity security program and achieve faster, more impactful security outcomes. It guides organizations through their identity security journey by assisting them in understanding the identity attack chain, assessing their security posture, building their roadmap, and learning best practices.

This valuable resource is founded on prescriptive guidance on the knowledge and experience we've gained, along with our Unit 42® teams, in researching, understanding, and tackling threats in the identity security space. Working across our global customer base, we've gained deep security threat insights from postbreach experiences, frontline remediators, red teams, and innovative researchers.

Idira Identity Security Blueprint, also called Idira Blueprint, provides self-service, on-demand access to a broad ecosystem of educational resources and collateral, including videos, whitepapers, toolkits, and success knowledge articles.
